reinvented

D-SCOPE+

The diamond microscope **reinvented**

What you need to know about the D-Scope+

The D-Scope+ is the new version of the D-Scope, the indispensable analysis tool for all types of diamonds and gemstones since 2001. Every aspect of the D-Scope

has been further optimized in the D-Scope+, offering not only the best, but also the most innovative diamond analysis experience on the market.

Key features of the D-Scope+

Illumination

- Revolutionary dark-field lighting technology allows you to choose between three different colours of light: yellowish light, white daylight and extremely strong white light.
- Clarity analysis experience is made more efficient, since these different colours of light are perfect for studying all kinds of internal and external characteristics of the diamond.
- Colour and intensity of the light can be adjusted very easily by using the touch-keys on the black panel.

Manipulation

- State-of-the-art vacuum gem manipulator makes it possible to hold the stone and move it in all directions without touching it.
- New design of the D-stick, improving your comfort while manipulating the stone.

Ergonomics

Completely redesigned to ensure a comfortable position for the user:

- Pre-inclination and potential to give a forward tilt to the microscope;
- Height of optics and eyepieces can be adjusted according to the eye position of the user;
- Manipulation table can move up and down to achieve proper focus on the stone. As a consequence, the user stays in a comfortable position at all times.

Optics

A wide variety of optical heads can be chosen from the world's most famous manufacturers, such as Zeiss and Leica. Stereo zoom optics provide the ability to see fine details in 3D. The optical excellence allows better, faster and more reliable identification, analysis and measurement. The long working distance permits easy manipulation of the inspected stones. All optics are standard equipped with 10x eyepieces.
